Background

In today's global economy, Malaysia is becoming increasingly dependent on its people to develop and adapt competencies to face current challenges and to develop rapidly to become a high-income nation. This will require not only the education system to be restructured and developed, but also the focus of the educational system to move from rote learning to the development of higher-order thinking skills (HOTS). This is because the education system needs to be able to develop and enhance students' intellectual capacity. This can only be achieved through a system that aims at developing the students' Higher Order Thinking Skills (HOTS). To achieve this, the Higher Education System (HES) has been focused on implementing a platform to further enhance teachers' understanding of HOTS, especially those involved in the teaching of English as a Second Language (ESL).

Objectives

The primary goal is to enhance teachers' understanding of higher-order thinking skills (HOTS) and to enable them to incorporate these skills in their classroom activities. This will be achieved through various types of assessments that teachers can use in accordance with the different levels of HOTS.
